

CHAPTER OVERVIEW

This chapter will examine the law of general and limited partnerships. General partnerships are among the oldest types of business associations. For example, the famed Medici Bank of Renaissance Italy thrived in part because it established bank branches throughout Europe that were locally organized as separate partnerships. General partnerships are still used today because they are easy to establish and, unlike other business associations, they do not require registration with the state. General and limited partnerships also provide a high degree of flexibility with respect to the allocation of management roles, profits and losses, and voting rights.
